

Day 2 – Power BI Assignment

Steps to reproduce:

I learned that these charts can be made by putting Product on the axis, adding Sales and Profit as values, and choosing the type of bar or column chart. A stacked bar chart shows the total value for each product and how Sales and Profit contribute to that total. A clustered bar chart places Sales and Profit side-by-side, making it easier to compare the two measures directly across categories.

Insight:

- Paseo is the top performer with the highest Sales and Profit.
- VTT, Velo, and Amarilla sit in the middle range with consistent results.
- Montana and Carretera show the lowest performance across both measures.
- Stacked charts reveal that Paseo contributes the most to overall revenue.
- 100% stacked charts show similar profit percentages (10–14%) across all products.
- This similarity suggests stable and consistent cost structure for the entire product line
