Day 1 – Power BI Assignment

Sum of Sales by Product

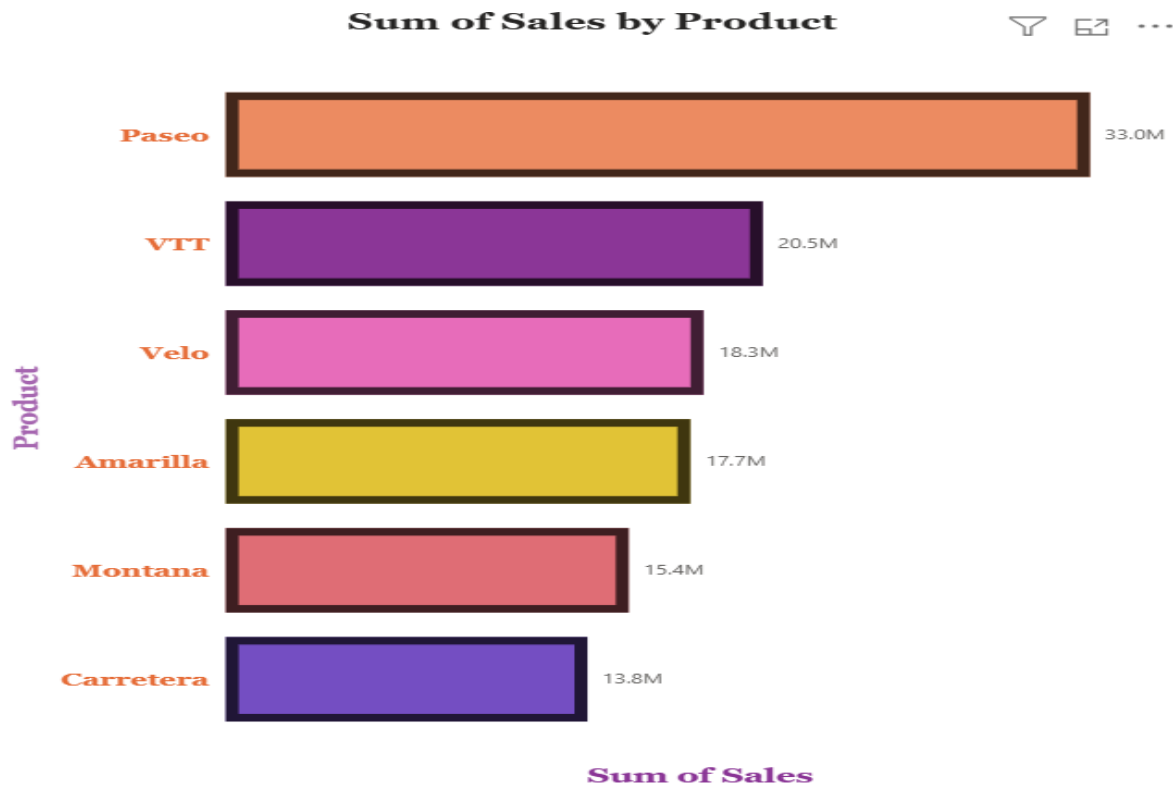

Steps to reproduce:

I learned how to create basic Barchart in power BI using product wise sales data and apply formatting to make them visually appealing. This included customizing colour , labels , titles and adjusting chart layouts for better readability.

Insights:

➢ Paseo has the highest sales, clearly standing far above all the other products in total sales.
➢ VTT follows next, showing strong sales performance, though still much lower than Paseo.
➢ Amarilla and Montana have moderate sales, placing them in the middle range compared to the other products.
➢ Carretera has the lowest sales overall, making it the weakest-performing product in the group.
